**RE: Reference Letter**

**To whomever It May Concern:**

This is a letter of recommendation for anyone who wishes to employ the services of Envent Corporation for degassing services. During the last eight years Envent has conducted several degassing operations at three of Chevron's Marketing terminals in the Los Angeles area. The most important concern of course for Chevron during any one of these operations is the safety of that operation. During each of these degassing operations Envent performed every one of them at each of these sites in a very safe, controlled and efficient manner. Additionally, Envent has always provided trained, qualified and knowledgeable personnel to perform these services. They have even been able to respond to our requests for degassing services on an emergency basis.

Envent has also provided Chevron with storm water discharge water treatment services and also with vapor control devices such as carbon canisters. In every case they have performed these services in a safe, controlled and efficient manner. They have also provided trained, knowledgeable and qualified personnel to perform these services.

All of the degassing equipment and other equipment that Envent has provided have been licensed with the South Coast Air Quality Management District. Envent has always operated in compliance with their permits and has always maintained the required documentation in conjunction with those permits.

Envent's fees are also considered to be fair and reasonable for the type of services they have provided.

Overall, Envent has an excellent safety record with Chevron Marketing in the Los Angeles area. For this reason I would highly recommend Envent for degassing services and any other service they provide.

**Respectfully Yours,**
