From: [REDACTED] Torrance Refinery

**Re: Envent Corporation Reference of Services**

One of the managers from Envent asked if I would provide a reference of their services. I am more than happy to. Envent has performed tank degassing, vapor control and monitoring services at the Torrance Refinery for approximately 10 years. The Los Angeles Basin has some of the most strict environmental regulations in the US. We rely on Envent to satisfy our compliance with these regulations on our projects. They have reliable Degassing equipment, programs and procedures to ensure documentation is maintained as well. They meet the refinery safety requirements and have an excellent safety record. If you need more information, feel free to call me.
