Re: SHCU Flare-less Turnaround

Dear Miss Domingo:

I would like to take this opportunity to express Shell Deer Park Refinery's appreciation regarding a successful completion of the referenced project. As you are aware, this process had not been completed within the Shell Oil Products Company before. With the new Flare-less regulations the Hydro-Cracker turnaround would have been delayed by several days without your assistance. In my opinion your portable combustion units were most effective in addressing our needs. The capability of your engineered system to handle the temperature and flow rates of our unit depressurization was key to the success of our turnaround. Furthermore, it goes without saying that your demonstrated knowledge and experience in environmental compliance contributed to your success.

Again, we appreciate your assistance with this project and we hope to take advantage of your services for similar projects.

Sincerely,

Operations Coordinator
Hydro- Deer Park
